

Emil Laine

Senior Full-Stack Developer – end-to-end product engineering

Helsinki, Finland · remote and on-site laine.emil@gmail.com

Portfolio **GitHub** **LinkedIn** **itch.io**

12 years of software development experience, including 7 years in software consultancy at Reaktor building full-stack products with multidisciplinary teams for international clients.

I do my best work where engineering meets UI/UX and visuals: design systems, interfaces, and game graphics. I'm an excellent written communicator, and thrive in async-first teams or solo. I have a strong attention to detail, whether that means being responsible for a whole product end to end or going deep on my part of a larger team.

I focus on architecture, design, specs, reviews, and quality, with AI coding agents handling implementation, staying hands-on where depth is needed.

Skills

Product engineering: full-stack apps; most experienced with React, TypeScript, Node.js, and PostgreSQL – including international production apps and complete rewrites

UI/UX, design systems, visuals: component libraries, data visualization, accessibility, screen readers, CMS-driven sites, CSS, CSS-in-JS, shaders, procedural content; language design and developer UX

Game development: from concept to playtest to release with Unity, Unreal Engine 5 (including Blueprints), and Godot; C#, C++, Rust, and custom 2D game engines

Systems programming: C, C++, Rust, compilers, LLVM

Delivery & collaboration: embedded client teams, Agile (Kanban, Scrum), automated testing, CI/CD, code reviews, documentation, AI-assisted delivery (specs, parallel implementation, review-led quality)

Experience

Reaktor – Software Developer, Consultant

2017 – 2019, 2021 – 2024

- Delivered **full-stack web applications** (React, Node.js, TypeScript, PostgreSQL) in client-embedded, multidisciplinary teams.
- Focused on **UI-heavy, visual work** – polished, accessible features with designers; raised quality via **testing, reviews, and shared practices**.

Selected client work

Epic Games – Design Systems, Senior UI Engineer (2021 – 2024)

Shipped a performant and accessible design system + React component libraries (unstyled and styled UI components, design tokens, icons, data visualization, etc.) used by teams at Epic Games to maintain a consistent look across Epic-themed products. Focused on consistency (both in API design and visuals), performance, thorough testing, accessibility (including screen-reader support), and right-to-left language support. Also contributed to social overlay features such as parental PIN, shipped in multi-platform Epic Games titles such as Fortnite, Fall Guys, and Rocket League.

React, TypeScript, CSS, Design tokens, Accessibility, Snapshot testing, UI/UX

Another Tomorrow – full site rewrite (2021)

In a two-developer team, shipped a full rewrite of AnotherTomorrow.co e-commerce site under a tight deadline – from Vue/Nuxt + Shopify to React/Gatsby + Contentful on the Chord sales platform.

React, TypeScript, Gatsby, Contentful, CSS, UI

Reaktor Defence & Security (2021)

Full-stack development; details confidential due to client constraints.

React, Node.js, TypeScript, CSS

KONE Care Contract sales tool (2019)

Global maintenance-contract tool in 30+ countries; joined the USA/Canada rollout implementing new requirements, including a hierarchical business-rules definition UI for the offer wizard.

React, Node.js, TypeScript, PostgreSQL, CSS

KONE Residential Flow sales tool (2018 – 2019)

Sales tool used in 20+ countries with extensive localization including right-to-left language support; auto-generated sales PDFs; Salesforce integration; handled technical handover of the codebase.

React, Node.js, TypeScript, PostgreSQL, CSS, Salesforce

Adidas Glass (summer 2017)

Contributed to the React rewrite of the Adidas global site; implemented responsive, reusable front-page components.

React, TypeScript, CSS, UI

Reaktor internal projects

A coding puzzle game used for recruiting; meeting-room system with facial-recognition lobby screen; an offline-first PWA from prototype to MVP.

Go, WebAssembly, TypeScript, React, Node.js, CSS, PWA, UI/UX

G Livelab – Software Developer

2020

(Civilian Service, Livelaboratorio Oy / Finnish Musicians' Union)

- Shipped **live-event streaming in two weeks** when COVID closed venues – backend + UIs for managing and streaming events, later on-demand video.

  Node.js, Flow, Mux, MongoDB
- Designed and built **CMS and end-user features** across event/ticket, product/inventory, customer/employee management, and the website.
- Also contributed to **Radio Helsinki** web features (operated by the same owner).

Independent work

Game Developer

2024 – Present

- Full-time focus on **game development**: game design, graphics, and playable prototypes.
- Shipped **multiple prototypes and playtests** using Unity, Unreal Engine, and Godot. From concept to playtest, end to end.
- Studied **game graphics**: pixel art and 3D (Blender), shaders (GLSL/HLSL, Material/Shader Graph), procedural content (UE5 PCG, geometry nodes).

Alchemist – roguelike game (2026)

2D pixel-art roguelike with emergent mechanics and procedural dungeons – systems for interaction, enemy AI, and items, with automated tests.

Godot, C#, Pixel art, Audio integration, AI-assisted development

Kaiku – first-person exploration game (2026)

Whole game world procedurally generated at design time using UE5 Procedural Content Generation graphs operating on hand-drawn splines in 3D space to carve mountains, paths, lakes, lay out forests, different biomes, bridges, etc.

Unreal Engine 5, Tech art, 3D modeling, Shaders, Procedural content generation

The Observer Effect – first-person puzzle game (2024 – 2026)

Perspective puzzles making use of forced perspective tricks – interact with shapes hidden in the environment that become apparent only when looking from the correct angle.

Unreal Engine 5, Tech art, Shaders, Gameplay systems, Puzzle design

cx – systems programming language (2017 – 2021)

Designed and built a modern systems language for performance + productivity with attention to syntax and developer UX: compiler, test suite, project site.

C++, LLVM/Clang · 152 ★

ts-llvm – TypeScript to LLVM compiler (2018)

Compiles strictly-typed TypeScript to LLVM IR via the TypeScript Compiler API, targeting native code / WebAssembly, with a small C++ runtime for built-in APIs.

TypeScript, C++, LLVM · 292 ★

Languages

Finnish – native **English** – fluent

Education

Computer Science studies, University of Helsinki (2015 – 2017)

Focus: full-stack web dev, programming languages, compilers, game dev

3D Game Graphics studies, Helsinki Vocational College (Stadin AO) (2026)

3D modeling/texturing and a team game project as project and tech-art lead

Additional

Stack Overflow – 43k reputation, 917 answers, 4M users reached, 11 gold badges incl. C++.

Open source – experience contributing to and maintaining open-source projects.

Hackathons & game jams – Global Game Jam 2026, GMTK 2024, Ludum Dare 55, Junction 2018, Tournament Game Jam at Microsoft Flux, Elo Data Science Hackathon, and more.

Electronic music as Flogram – composition, music production, and mixing since 2011. Releases on streaming platforms, DJ gigs, as well as audio design and atmospheric work for game projects.
